To support local industries the Party committee of the PLA Air Force stationed in Chekiang held a discussion meeting and issued a circular to its units calling on commanders and fighters to emulate Lozang Tanzin, a model in cherishing the people and the model company that distinguished itself in combating earthquakes, to study theory, to disseminate the line, to take in account the interest of the whole, to carry forward the glorious tradition of supporting the Government and cherishing the people, and to take part in industrial productive labour with a fighting spirit so as to make contributions to consolidating the dictatorship of the proletariat.

Upon receiving the circular, all units actively organized the commanders and fighters to study the theory of the dictatorship of the proletariat, to criticize the bourgeois military line pushed by swindlers like Lin Piao and their crimes of undermining Army-Government and Army-people unity, and to recall the glorious tradition of the difficult war years in which the Army and the people fought and engaged in production together. All units conducted education on the glorious tradition that the PLA is a working force and a production corps as well as a fighting force in order constantly to raise the commanders and fighters' consciousness of implementing Chairman Mao's Army-building line and supporting socialist construction in the various localities.

The comrades said: Since our Army comes from the people, it must serve the people. Helping all localities to increase production is a glorious task of our Army and the actual deed of implementing Chairman Mao's great strategic principle: "Grasp revolution and promote production and other work and war preparedness."

The leadership at all levels has regarded industrial production as its current important task and has made careful study and arrangements in accordance with the actual conditions of each unit, taking the initiative in establishing contact with various factories.

Beginning on 28th July and led by leaders at different levels, commanders and fighters went in groups to work at the various factories. While working with the workers, the commanders and fighters displayed the PLA's tradition of arduous struggle. Be it veteran comrades who have passed 50 or new fighters who have just joined the Air Force, ground crews or flying crews, they all took the initiative in carrying forward the same vigour, the same revolutionary enthusiasm and the same daring death-defying spirit displayed by their revolutionary predecessors in the revolutionary war years and worked continuously, fearing neither heat nor fatigue, in an effort to make greater contributions to industrial production.

(Kuo Chi-yuan), deputy director of the logistics department, was seriously wounded in his (?back) and left arm during the revolutionary war years. When he heard that his unit was going to work in a factory, he actively took the lead despite the fact that it was difficult for him to bend his back. While working at the Hangchow steam turbine works, (Li Chi-ming), commander of a unit, set a good example to the fighters by arduously working at a machine for a few hours. While working at a factory, (Ni Chung-sheng), deputy commander of a unit who had been awarded an order of merit, second class, for his combat role in bombing and sinking enemy warships during the campaign to liberate Ichiangshan Island, displaying the spirit of storming and crushing the enemy, worked where the tasks were difficult. He actively took the lead in unloading coal. He never uttered a word despite the blisters on his hands. He also joined other workers to work in the open ground to remove the piled-up planks, although this work was rather difficult, and he was warmly praised by other comrades.

While working at the Hangchow glass factory, the trainees of a training group sought to do heavy work by transporting raw materials for the factory. To do this, they had to stay in high-temperature workshops, but they did not mind and thus ensured the continued supplies of raw materials. While working at the Hangchow steam turbine works, an anti-chemical warfare company of a unit displayed the revolutionary spirit of being hard-working and able to endure hardship. In one day, 10 cadres and fighters unloaded 50 tons of cement, and none of them complained of being tired.
